

Location Hub Viewer[®] (LHV)

Release Notes V2.6

10/26/2017

Bug Fixes

Summary:

1. Legend displaying “Value” and “Label”

What did it do?

The legend displayed the “Label” field even if it was not populated (*Please see Image A*).

What is the new outcome?

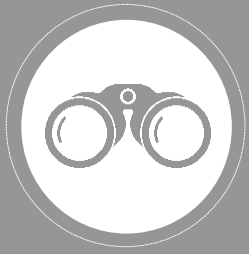

Now, if the “Label” field is blank, there will no longer be a “Value” column in your legend. In this scenario, data that is in the “Value” field will be migrated over to the “Label” field (*Please see Image B*).

Fill	Min	Max	Label
Light Green	285...	533...	
Light Green	533...	781...	
Light Green	781...	102...	
Light Green	102...	127...	
Light Green	127...	152...	
Light Green	152...	177...	
Light Green	177...	202...	
Light Green	202...	227...

Bug Fixes

Summary:

2. Double Layer Styling Dialog Box

What did it do?

When you selected a layer from the Layer Control Menu, and opened the “Styling” dialog box, it was possible to click on a separate layer, and have a second “Styling” dialog box appear (causing confusion around what layer you were modifying) (Please see Image A).

What is the new outcome?

Changes have been made to the UI so only one styling interface can be opened at a time (Please see Image B).

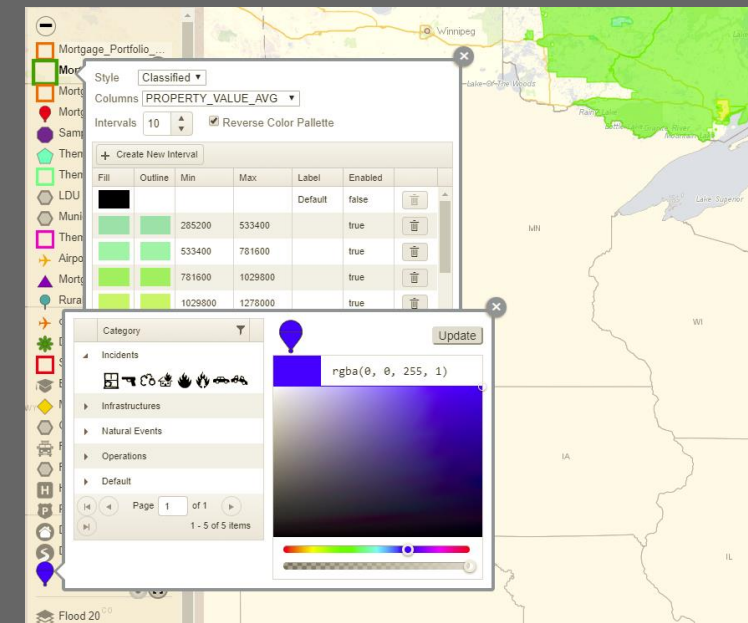

Image A: Two dialog boxes displayed at the same time

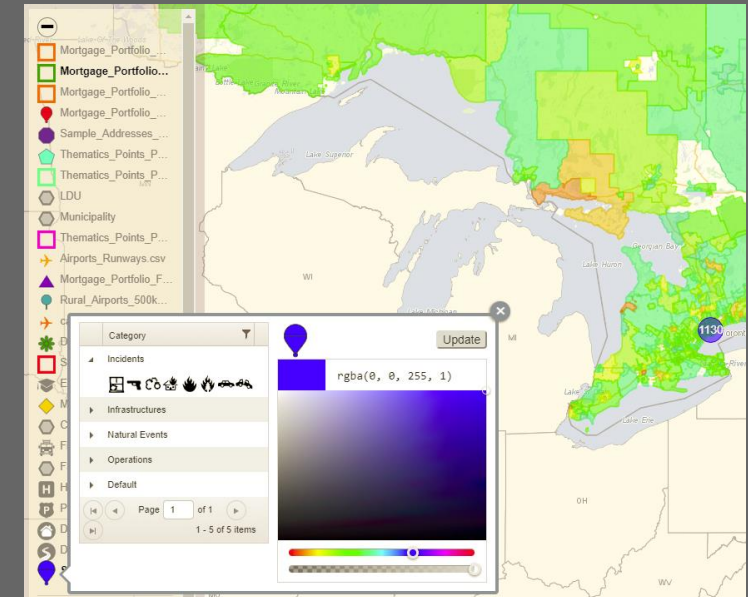

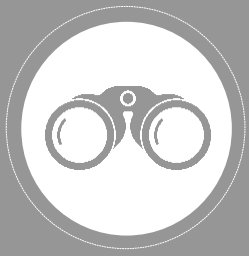

Image B: After fixes; one dialog box displays

Bug Fixes

Summary:

3. Thematics Dialog Pointing to Wrong Layer

What did it do?

Sometimes, when opening the “Thematics” dialog box, it would not point to the selected layer (*Please see Image A*).

What is the new outcome?

Now, the “Thematics” dialog box will always point to the selected layer (*Please see Image B*).
